

Water Conservation Tips

for outside your home during a drought

LOW WATER CONDITIONS

are slow to occur and caused by a combination of factors such as **lack of rain, high temperatures and increased demand for water.**

DID YOU KNOW?

 The average daily water use per person in Canada is

251 litres

Domestic, commercial, or agricultural water consumers can all help **mitigate the impacts** of low water conditions by **implementing efficiencies** and **limiting non-essential water use.**

1

Use a **broom or blower**, not a hose, to clean driveways and sidewalks.

2

Choose **drought resistant** trees and plants.

3

Add **mulch** on soil surfaces and around trees and plants to reduce evaporation.

4

Set **mower blade higher** to encourage deeper roots.

5

Don't over water the lawn as soil cannot retain extra moisture, and **adjust sprinklers** to reduce runoff.

6

Water lawns, plants, and gardens **early in the morning** or **later in the evening** when temperatures are cooler.
